

GONZALO VEGA RAMOS/Python Developer · AI/LLM Applications · Backend Engineering

PROFILE

Software Developer focused on Python, backend development and AI/LLM applications, with practical experience building software systems, REST APIs and integrations. Trained in Machine Learning and Deep Learning, with hands-on experience integrating local LLMs into backend applications.

Currently developing Aquila, a modular personal AI assistant built around LLM-based language interpretation, structured outputs, planning, orchestration, memory and specialized services. Also developing Heracles, an automated job-search and matching system using Python, APIs, NLP and LLMs.

EXPERIENCE & PERSONAL PROJECTS

AQUILA — Personal Multi-Agent AI Assistant

- Personal Project · Ongoing
- Designed and developed a modular AI assistant architecture separating language interpretation, planning, orchestration, memory and specialized execution.
- Developed backend services in Python with persistent storage using SQLite.
 - Integrated local LLMs through Ollama for natural-language interpretation and task execution.
 - Implemented structured JSON outputs containing intents, parameters, context and multiple requested actions.
 - Designed an orchestration layer to coordinate interpretation, planning and execution across specialized services.
 - Created a custom dataset of labelled user requests to validate and evaluate LLM-generated interpretations.
 - Designed the system to support the integration of additional specialized agents and capabilities.
 - Implemented REST-based integrations and service-oriented components.

Technologies:

Python · LLMs · Ollama · Qwen3 · SQLite · REST APIs · Multi-Agent Architecture · Git

HERACLES — Automated Job Search & Matching System

- Personal Project · Ongoing
- Designed and developed a Python-based platform to automate the search, analysis and matching of job opportunities.
- Developed automated workflows for job collection, processing and filtering from external sources.
 - Implemented profile-to-job matching and analysis using structured criteria.
 - Integrated NLP and LLMs to analyse and classify job descriptions.

Technologies:

Python · LLMs · NLP · APIs · Automation · SQLite · Git

MINSAIT — Software Development Intern

2025

- SIA Cybersecurity Department · 2025
- Developed and maintained connectors for SailPoint IdentityNow integrations.
- Implemented REST API endpoints and CRUD operations.
- Developed integration components using TypeScript.

Technologies:

TypeScript · REST APIs · SailPoint IdentityNow · Postman

MADRID CITY COUNCIL — Web Development

2022-2023

PHP · Laravel · WordPress · Power BI

EDUCATION

Fundamentals of Artificial Intelligence & Machine Learning

CEI · Madrid · 2026

Machine Learning · Deep Learning · Neural Networks · CNNs · RNNs/LSTMs · Keras · TensorFlow · PyTorch

Grado Superior Multiplatform Application Development (DAM)

Colegio Lagomar · Madrid · 2024-2025

Azure y C#

Tajamar · Septiembre 2022 – Mayo 2023

C# · .NET · ASP.NET · Entity Framework · Web API · Azure

Grado Superior Web Application Development (DAW)

Valle del Miro · Madrid · 2019-2021

Cloud Architecture & Data Engineering

Docencia y Multimedia Madrid · Inicio septiembre 2026

Cloud Architecture · Microservices · Data Engineering · Big Data · Event-Driven Architectures · AWS · Azure · GCP

TECHNICAL SKILLS

Programming

Python · C# · TypeScript · JavaScript · PHP · Java

Backend y APIs

Python · REST APIs · SQLite · PostgreSQL · .NET · ASP.NET · Swagger

IA y LLMs

LLMs · Ollama · Qwen3 · Arquitecturas multiagente · Machine Learning · Deep Learning · TensorFlow · PyTorch · Keras

Cloud / Datos:

Azure · SQLite · PostgreSQL · Power BI

Tools

Git · Postman

Frontend:

HTML5 · CSS · React

LANGUAGES

English — C1

Spanish— Native
